CHAPTER 7

UNDERSTANDING INTERNATIONAL EDUCATION

This chapter explores:

- what international education is;
- how it has developed over the years;
- why it is important to study it.

ACTIVITY 7.1 DEFINING INTERNATIONAL EDUCATION (1)

Before beginning this chapter, can you write down a definition of what you think international education is? List what you see as aspects of international education. At the end of the chapter, reflect on your definition. Is international education what you thought? How it is different from comparative education, as outlined in Chapter 1, and where might these two fields overlap?

As previously stated in Chapter 1, comparative education is often used interchangeably with international education. These so-called 'twin' fields (Bray, 2010) certainly overlap but are two distinct areas of study. This chapter seeks to define key concepts associated with international education and provide a rationale for studying it. International education is concerned with a broad range of subjects, extending from curriculum matters to inclusive teaching. So then, how exactly do we explain what it is? How is it different from comparative education? Why is it important to study it?

WHAT IS INTERNATIONAL EDUCATION?

KEY CONCEPT: INTERNATIONAL EDUCATION

International education, according to Thompson (2016, p. xxi), 'is just one of a number of terms that conceptualise a form of education that in some way takes as its focus a non-national approach to formal education, whether that be at school, university or other level(s)'.

Mary Hayden, a well-known scholar in the field of international education, asserts that, like comparative education, there is no easy way to characterise international education either. She writes, 'there is no simple definition of international education to which all would subscribe' (Hayden, 2006, p. 5). This difficulty is echoed by a number of writers in the field and debates surrounding terminology have been around for decades (Marshall, 2007). Dolby and Rahman (2008) contend that international education is used as an 'umbrella term' and, as a result, there are many varied definitions. 'The diversity of our world makes a "one size fits all" model of international education impossible' (Tate, 2012, p. 207). Simandiraki (2006, p. 35) also states that 'international education is a field collectively understood by the academics and practitioners involved in it, but still difficult to define universally. As a result, there are many definitions of international education, which make difficult not only its description, but also the description of its relationship with other elements of practice.' Cambridge (2012, p. 230) adds to this by maintaining that 'it remains controversial whether "international education" constitutes an academic subject in its own right, or whether it is a hybrid field comprising international extensions to a variety of other cognate areas of inquiry. The term "international education" can be used in a variety of contexts.'

Epstein (1992) believed that international education was distinct from, but related to, comparative education. As previously stated in Chapter 1, Epstein (1992, p. 409) argued that international education 'refers to organized efforts to bring together students, teachers, and scholars from different nations to interact and learn about and from each other.' He also maintained that 'practitioners of international education are experts on international exchange and interaction. What makes them expert is based in part on a knowledge of comparative education. Comparativists, however, are scholars first and foremost, more interested in *explaining* how and why education relates to the social factors and forces that form its context than in merely knowing about other people's cultures and their education' (Epstein, 1992, p. 409).

International education is often used together with international schooling in the literature. While much of the literature does deal with international schools, it is important to note that we cannot substitute one for the other. International schooling is only a part of what constitutes

international education. Some international schools (it is important to note that not all) are involved in international education. International schooling will be discussed in Chapter 11.

KEY CONCEPT: INTERNATIONAL MINDEDNESS

International mindedness is about understanding, respecting and valuing different cultures. It is concerned with embracing diversity but also recognising a common humanity in order to create a better, more peaceful world.

International education is closely linked with 'international mindedness' (Cambridge, 2012). What is 'international mindedness'? Hill (2012) believes international mindedness is the product of a successful international education. It is about pursuing knowledge and understanding of cultural differences and global issues and how they affect us all. It is also about being able to critically analyse those issues in order to propose solutions. More than that, Hill also believes international mindedness is a value proposition: 'It is about putting the knowledge and skills to work in order to make the world a better place through empathy, compassion and openness – to the variety of ways of thinking which enrich and complicate our planet' (Hill, 2012, p. 246). Fundamental to international mindedness is the appreciation of cultural diversity within and between nations and the multiple perspectives which arise from it. International mindedness lies closely at the heart of the aim and purpose of many schools worldwide.

ACTIVITY 7.2 FACETS OF INTERNATIONAL MINDEDNESS

Below is a list of some facets of international mindedness listed by the IB School Leadership (2018). Can you organise these from the most important to the least?

- Being open to different outlooks and worldviews
- Being able to take yourself away from the centre of what is right and acceptable
- Demonstrating respect for others
- Not too narrow minded
- Multilingual
- Knowing where you stand in relation to cultural relativism – being able to substantiate your cultural position
- Ability to work in diverse teams
- A declining sense of egocentricity
- Ability to adjust communication
- Being globally engaged
- Awareness of own culture

An appreciation of cultural diversity is important if we are to include all individuals in the participation of society. Nowadays, many of us, particularly in the UK, live in a multicultural society. 'The term multicultural describes the culturally diverse nature of human society. It not only refers to elements of ethnic or national culture, but also includes linguistic, religious and socio-economic diversity' (UNESCO, 2006, p. 17). What does this mean for educators?

'Multicultural education uses learning about other cultures in order to produce acceptance, or at least tolerance, of these cultures' (UNESCO, 2006, p. 18). It is very much rooted in national systems of education where the aim is to respond to the needs of migrant children (Hill, 2007a). Multicultural education can include bilingual education, immersion programmes, minority education and community education (Husén and Postlethwaite, 1994, in Hill, 2007a). According to Fujikane (2003, p. 137), 'the meanings of multicultural education, the times when it became important, and the practices implemented in schools all varied from country to country'. Hill (2007a) also points out that the term 'multicultural education' is not used consistently and is often used interchangeably with 'intercultural education'.

What, then, is intercultural education? 'Intercultural education aims to go beyond passive coexistence, to achieve a developing and sustainable way of living together in multicultural societies through the creation of understanding of, respect for and dialogue between the different cultural groups' (UNESCO, 2006, p. 18). This is discussed further in Chapter 11, but for the purpose of this chapter it is important to know that multicultural and intercultural education can play an important role in international education.

One way that international education can be promoted is through the curriculum. Many international schools and some national schools follow the International Baccalaureate (IB) curriculum which defines international education according to a set of criteria, listed below:

- Developing citizens of the world in relation to culture, language and learning to live together
- Building and reinforcing students' sense of identity and cultural awareness
- Fostering students' recognition and development of universal human values
- Stimulating curiosity and inquiry in order to foster a spirit of discovery and enjoyment of learning
- Equipping students with the skills to learn and acquire knowledge, individually or collaboratively, and to apply these skills and knowledge accordingly across a broad range of areas
- Providing international content while responding to local requirements and interests

- Encouraging diversity and flexibility in teaching methods
- Providing appropriate forms of assessment and international benchmarking.

(IBO, 2012)

The International Baccalaureate began in 1968 as a not-for-profit organisation and offers four programmes from ages 3 to 19. In 2018, the IB has worked with more than 4,000 schools to over one million students worldwide (IBO, 2018). The IB will be discussed further in relation to international schools in Chapter 11.

ACTIVITY 7.3 THE INTERNATIONAL BACCALAUREATE

How many schools can you find near you that offer the IB? Use the following website: www.ibo.org/programmes/find-an-ib-school

GLOBALISATION AND INTERNATIONAL EDUCATION

KEY CONCEPT: GLOBALISATION

Globalisation can 'be defined as the intensification of worldwide social relations which link distant localities in such a way that local happenings are shaped by events occurring many miles away and vice versa' (Giddens, 1990, p. 64).

Globalisation has played a key role in shaping international education over the past couple of decades. The nature and extent to which it has done so are widely debated and will be explored in Chapter 8. Definitions of globalisation vary; it is 'a complex and highly contested term – and one that is widely used but open to multiple interpretations' (Crossley and Watson, 2003, p. 53). However, in order to provide clarity for the purpose of this book, the following definition will be used: 'Globalization may be thought of initially as the widening, deepening and speeding up of worldwide interconnectedness in all aspects of contemporary social life, from the cultural to the criminal, the financial to the spiritual' (Held et al., 1999, p. 2).

In this definition, 'all aspects of contemporary social life' refers to the economic, political, social and cultural spheres that global forces have touched. These spheres influence education (and vice versa) in various ways and to varying degrees. Moreover, 'worldwide interconnectedness' means individuals, societies and nations are linked economically, politically, socially and culturally. We are linked socially through the media and telecommunications; culturally through movements of people; economically through trade and finance; environmentally through sharing one planet; politically

through international relations and systems of regulation (Oxfam, 2015). Because we are 'interconnected' or 'linked', what happens in other parts of the world on a global level, in turn, affects us on a local level.

How has this worldwide interconnectedness influenced education both nationally and internationally? Some academics argue that globalisation has created greater standardisation in norms of teaching and learning internationally (Phillips and Schweisfurth, 2014; Spring, 2015). Globalisation has also played a role in the internationalisation of higher education in institutions worldwide. Internationalisation at the national/sector/institutional level is defined as 'the process of integrating an international, intercultural or global dimension into the purpose, functions or delivery of post-secondary education' (Knight, 2004, p. 11). The internationalisation of higher education will be discussed in Chapter 12.

The political, economic, technological and cultural trends that have emerged as a result of globalisation have given rise to a growing interest in global citizenship education (Ibrahim, 2005). According to Phillips and Schweisfurth (2014, p. 58): 'Global Citizenship Education (GCE) explicitly seeks to inculcate in learners an international outlook and a sense of belonging to, and responsibility towards the global community.' Oxfam (2015, p. 4) defines a global citizen as someone who:

- is aware of the wider world and has a sense of their own role as a world citizen;
- respects and values diversity;
- has an understanding of how the world works;
- is passionately committed to social injustice;
- participates in the community at a range of levels, from the local to the global;
- works with others to make the world a more equitable and sustainable place;
- takes responsibility for their actions.

In this sense, global citizenship education deals with learning about others, preparing young people for the challenges and issues they are currently facing and the ones they may potentially face in the future. Global citizenship education aims to support young people in dealing with the 'interconnectedness' we now face.

ACTIVITY 7.4 GLOBAL CITIZENSHIP EDUCATION

Using the Oxfam (2015) criteria, are you a global citizen? If yes, what examples could you give to provide evidence to support this claim?

Sylvester (2005) regards Robert Hanvey's model of 'education for a global perspective' as a key point in the history of defining international education. Originally written in 1976, Hanvey (2004, p. 1) describes education for a global perspective as:

> learning which enhances the individual's ability to understand his or her condition in the community and the world and improves the ability to make effective judgments. It includes the study of nations, cultures, and civilizations, including our own pluralistic society and the societies of other peoples, with a focus on understanding how these are all interconnected and how they change, and on the individual's responsibility in this process. It provides the individual with a realistic perspective on world issues, problems and prospects, and an awareness of the relationships between an individual's enlightened self-interest and the concerns of people elsewhere in the world.

Hanvey's definition has subsequently been one of the most frequently cited works relating to international education in the last thirty years (Sylvester, 2005).

The United Nations Educational, Scientific and Cultural Organisation (UNESCO) has been involved in international education since its creation in 1945. It defines international education as 'education for international understanding' (Martínez de Morentin, 2004, p. 5). What does international understanding mean? International understanding is arrived at through education which is based on respecting human rights, maintaining peace and respecting others' culture. 'This international understanding promotes learning about diversity; about the richness of cultural identities; of the existence of individuals, races, nations and cultures with the capacity to communicate, share and cooperate with others; of the acceptance of difference as an opportunity to act with interest towards others; and understanding' (Martínez de Morentin, 2004, p. 98).

For UNESCO, a key component of education is concerned with promoting democratic coexistence, or peace in other words. According to Martínez de Morentin (2011, p. 598): 'Peace, from today's point of view, involves general well-being, equal opportunity to enjoy a society's benefits, and mutual respect. It results when everyone involved has rights and freedoms and when humans live in harmony with their environment.' UNESCO maintains that international education is an important concept that must be integrated into all the processes that develop and form human beings.

Like UNESCO, Thompson (in Hayden and Thompson, 1998, p. 278) refers to the ultimate objectives of international education as being 'related to the achievement of greater levels of mutual respect and harmonious coexistence among nations'. Education, and therefore international education, plays a key role in developing human beings who can

live together harmoniously, through respecting not only one another but their environment as well.

International education can also refer to the educational experiences of students of one country studying in another (Cambridge, 2012). This can include those students on exchange programmes such as Erasmus (European Community Action Scheme for the Mobility of University Students) and Erasmus Plus. 'Exchanges play a key role in creating the international scholar' (Phillips and Schweisfurth, 2014, p. 56). Between 1987 and 2013, around 3 million students participated in Erasmus (European Commission, 2018a). The Erasmus programme was part of the EU's Lifelong Learning Programme, which is administered by the European Commission, the executive body of the European Union. In 2014, the European Commission launched Erasmus Plus which supports education, training, youth and sport in Europe. It will enable around 4 million Europeans to study, train, gain experience and volunteer abroad (European Commission, 2018b). Lastly, Epstein (1992, p. 409) refers to international education as 'organised efforts to bring together students, teachers, and scholars from different nations to interact and learn about and from each other'. 'Organised efforts' can include both student and staff exchanges, which clearly play a vital role in international education.

ACTIVITY 7.5 'ORGANISED EFFORTS' IN INTERNATIONAL EDUCATION

Using Epstein's (1992) definition of international education, can you think of any other ways, apart from formal exchange schemes, that students, teachers and scholars can be brought together 'to interact and learn about and from each other'?

The term 'international education' has also been applied when researching education in developing countries. Crossley and Watson (2003, p. vii) point out that '[h]istorically, the label international education has often been used to describe the work of scholars from industrialised countries who have studied education in less developed countries'. Phillips and Schweisfurth (2014) support this view, stating that predominantly in the UK, the term international education has been strongly linked with the study of education in developing countries. However, as stated in Chapter 1, in order to gain clarity of the 'twin fields' and for the purpose of this book, Halls' (1990) classification of international education will be used. A brief reminder is necessary here in order to define the field. Halls subdivides international education into 'international pedagogy' and 'study of the work of international educational institutions'. 'International pedagogy is the study of teaching multinational, multicultural and multiracial groups,

e.g. in international schools, transnational schools (such as those of the European community), or the education of linguistic or ethnic minorities.' In other words, international pedagogy is not only about how we teach diverse groups of individuals, either in an international or national context, but also how we respond to the needs of particular groups of learners. 'It is also the study of such subjects as education for international understanding, peace education, international population and ecological studies.' Within this area, Halls (1990) also includes the resolution of intra-national differences regarding the teaching of controversial subject matter, efforts to 'objectivise' textbooks, the harmonisation of curricula and the establishment of international teaching norms. This partly refers to curriculum matters such as global citizenship education and sustainability, and also to the similarities found between schools across contexts (Phillips and Schweisfurth, 2014). Many would argue that the standardisation of education internationally is a result of globalisation (see Spring, 2015). The relationship between globalisation and education will be discussed further in Chapter 8.

The second component of international education, according to Halls, is the 'study of the work of international education institutions'. Although this overlaps with international pedagogy, it 'is more concerned with policy matters, such as the establishment of international acceptability of qualifications, the promotion of educational exchanges and the initiation of cultural agreements'. A good example of this is the Bologna Process (to be discussed in Chapter 12) and those organisations and people involved such as the European Commission, the Council of Europe and UNESCO-CEPES (Centre Européen pour l'Enseignement Supérieur).

Again, there is no agreement among scholars as to the usage of these terms and many, perhaps, would argue that international education is not a subfield of comparative education as Halls has proposed.

ACTIVITY 7.6 DEFINING INTERNATIONAL EDUCATION (2)

Find some books or journal articles with 'international education' in the title. Look at the table of contents. Can you identify the main topics? What is the book or article about? How do these topics relate to the various definitions described in this chapter?

HISTORICAL DEVELOPMENT OF INTERNATIONAL EDUCATION

Hill (2012) writes that the historical roots of international education date back to John Comenius, a Czech teacher, philosopher and writer in the seventeenth century. Comenius drew up numerous plans for international cooperation and Piaget (1993, p. 12) regarded him 'as a great forerunner of modern attempts at international collaboration in the field

of education, science and culture'. Comenius wrote about the establishment of Collegium Lucis in his *Treatise on the Universal Improvement of Human Affairs* (Goormanghtigh, 2004). The Collegium Lucis was to be a sort of international ministry of education that would foster international collaboration through, among other activities, student exchanges, textbooks using a standard language and creative teaching methods (Hill, 2012). One of Comenius's most important ideas was his philosophy of pansophism. His pansophic view of education was basically a form of universal education where everything is taught to everyone (both boys and girls). Because of his thoughts on education for everyone, Comenius's ideas may be regarded as one of the precursors to UNESCO (Piaget, 1993; Sturm and Groenendijk, 1999). When UNESCO began in 1946, it had 120 member countries and was tasked with promoting cooperation in the fields of education, science and culture. In fact, Goormanghtigh (2004, p. 3) asks, 'was it to become the *Collegium Lucis* that John Comenius had envisaged three centuries earlier? Would it be the embryo of the ministry of education that he had in mind?'

Crossley and Watson (2003) credit the origins of international education to César Auguste Basset, a French professor of literature who eventually became the director of education at the École Normale in Paris. Basset published a book in 1808 called *Essais sur l'organisation de quelques parties de l'instruction publique; ou, Réflexions sur les inspecteurs généraux de l'université et ceux des académies et observations concernant l'éducation en general* (which translates as *Essays on the organization of some parts of public education; or, Reflections on the inspectors general of the university and those academies and observations on education in general*). Despite the long and complex title, the book was only 97 pages in length. In it, Basset wrote about 'the usefulness of making observations in foreign countries about education and instruction in general' (1808, cited in Brickman, 2010, p. 47) and called for the Université de France to send a scholar who was free from bias and prejudices to go abroad and make these observations (Brickman, 2010). Basset's work was a few years before Marc-Antoine Jullien's book, *Esquisse d'un ouvrage sur l'éducation comparée* or (*Sketch and Preliminary Views on Comparative Education*) in 1817. Perhaps it is possible that Marc-Antoine Jullien, the 'father' of comparative education, was influenced by Basset's work and, if this is the case, then could it be argued that comparative education was influenced by initial developments in international education? In fact, Epstein (1992, p. 409) purports that '[a]lthough they are now concurrent pursuits, comparative education grew out of and was inspired by international education.'

This coincides with Noah and Eckstein's (1969) third stage of comparative education, as discussed in Chapter 1. The third stage occurred around the middle of the nineteenth century when scholars travelled to foreign countries not necessarily in the interest of advancing their own country's education but in order to promote international understanding.

Perhaps key events in international education were the catalysts for growth in the field of comparative education?

Sylvester (2007) believes that the beginnings of international education grew from the first world fair, the London Universal Exposition in 1851. The London Universal Exposition was originally called 'The Great Exhibition of the Works of Industry of All Nations' and is sometimes referred to as the Crystal Palace Exhibition, after the place in which it was held. There were 6,039,195 visitors, 17,062 exhibitors and 28 participating nations (Mattie, 1998). 'The first international world exhibition was born out the hope that all peoples of the world might live in harmony, and, more prosaically, out of a desire to tap new potential markets for British products' (Mattie, 1998, p. 12). In other words, the aim of the fair was twofold: first, to stimulate trade and industry and, second, to foster international cooperation.

At the 'Great Exhibition', an educational conference on kindergarten and other topics was held with representatives from Europe and the USA (Sylvester, 2007). This set the scene for international meetings on education to be held at subsequent world fairs in 1855 (Paris), 1862 (London), 1873 (Vienna) and 1876 (Philadelphia, PA).

Sylvester (2002) argues that there were serious efforts to establish international schools from the mid-1800s to the late 1920s. However, Stewart (1972, cited in Sylvester, 2002, p. 6) believes that the establishment of Spring Grove School (its official name was the London College of the International Education Society) in London in 1886 was the 'one genuine and successful attempt at international education in the nineteenth century'. International schools began a slow rise with the opening of the Odenwald School in Germany and the International School of Peace in Boston in 1910, followed by schools in Geneva and Yokohama in 1924 (Sylvester, 2007). However, it was not until after the First World War (1914–18) that a sizeable rise in international schooling began to happen worldwide (Hill, 2007b). This was largely due to the perception 'that the school could be effectively used as a medium of international understanding' (Arora et al., 1994, p. 11).

In 1921, the League of Nations was created in the aftermath of the First World War to maintain peace and security between nations. One way in which it promoted international cooperation was by calling for the revision of textbooks to remove nationalistic biases and the glorification of wars (Arora et al., 1994). The League of Nations lasted 27 years and was replaced by the United Nations in 1945.

Since its establishment in 1945, UNESCO, a specialised agency of the United Nations, has played a key role in fostering educational cooperation between nations. UNESCO was set up 'to contribute to peace and security by promoting collaboration among nations through education, science and culture in order to further universal respect for justice, for the rule of law and for the human rights and fundamental freedoms which are affirmed for the peoples of the world, without distinction of race, sex,

language or religion' (UNESCO, 1945). Its early activities included supporting the growth in international schools. In 1949, UNESCO organised a 'Conference of Principals of International Schools', which was attended by the heads of 15 schools 'wishing to develop an international outlook' (Hill and Hayden, 2010). In 1950, UNESCO financed a 'course for teachers interested in international education' at the International School of Geneva to discuss how schooling could be made more international in terms of content and methodology (Hill, 2001). There were 50 participants from 18 countries. Hill (2001) believes that, while on this course, participants devised the first known definition of international education:

> It should give the child an understanding of his past as a common heritage to which all men irrespective of nation, race, or creed have contributed and which all men should share; it should give him an understanding of his present world in which peoples are interdependent and in which cooperation is a necessity.
>
> In such an education emphasis should be laid in a basic attitude of respect for all human beings as persons, understanding of those things which unite us and appreciation of the positive values of those things which may seem to divide us, with the objective of thinking, free from fear or prejudice.
>
> (Final Report of the Course for Teachers Interested in International Education, 1950: Section I, in Hill, 2001, p. 38)

There are a number of institutes and centres, both globally and regionally, that work as part of UNESCO's education programme to support countries in dealing with some of the issues they are facing in education. The International Bureau of Education (IBE), founded in 1925, was originally a private non-government organisation and the first intergovernmental organisation in the field of education (UNESCO, 2012). In 1969, the IBE became an integral part of UNESCO but still operates autonomously. The IBE focuses particularly on curriculum development and on the contents, methods and structures of education in order to support its overall aim, which is the attainment of quality Education for All (UNESCO, 2008). The IBE also produces a quarterly journal entitled *Prospects* (published in English, French, Spanish, Arabic, Chinese and Russian) in the field of comparative education. Other UNESCO institutes include the International Institute for Educational Planning (IIEP), which helps countries to 'design, plan and manage their education systems', the Institute for Lifelong Learning (UIL) and the Institute for Information Technologies in Education (IITE).

Marshall (2007) believes that key developments in the UK since the 1980s and early 1990s have led to a second phase in 'global' rather than international education. The first phase, beginning in the nineteenth century, originated from the peace movements in the USA, Britain and continental Europe.

However, Marshall (2007) summarises some key themes now affecting the field as a result of the global agenda being firmly placed in the public eye. These include a growing interest and concern over the relationship between globalisation and education and new threats, such as terrorism, evoking fresh calls for global education and understanding.

ACTIVITY 7.7 INTERNATIONAL EDUCATION: PRODUCT OR PROCESS?

Have you received an international education? If yes, how do you know this? Is international education a product or a process? If not, explain why.

CONCLUSION

The concept of international education is complex and can mean different things to different people. However we choose to define it, common themes can be found. Respect for others, appreciation of cultural diversity, knowledge of global issues and learning to live together are just some of these common themes. At its simplest, international education is learning about others. What we learn, how we learn and why we learn depend on the context in which our learning takes place. You can find international education in publicly or privately funded national or 'international' schools, colleges or higher education institutions.

International education is delivered through policy initiatives, the curriculum, and the teaching and learning strategies employed by those involved in international education. As we continue to become further interconnected in the decades to come, international education may play an even more important role in creating harmony, peace and justice among individuals, societies and nations.

To summarise, international education, depending on the context, can refer to:

- education for global citizenship
- education for 'international understanding'
- education for 'international mindedness'
- education for sustainable development
- human rights education
- intercultural education
- international curricula, such as the International Baccalaureate (IB)
- international schooling
- international student and staff exchange

- multicultural education
- peace education
- the teaching and learning of diverse groups of individuals in a national or international context
- the teaching and learning of indigenous and ethnic minority groups.

CASE STUDY 19: GENOCIDE AND INTERNATIONAL EDUCATION

Throughout history, man has been the perpetrator of some of the most vicious crimes against humanity. This has resulted in the mass killings of hundreds and thousands of innocent men, women and children around the world. The Convention on the Prevention and Punishment of the Crime of Genocide, which was adopted by the United Nations General Assembly in 1948, defines genocide as any of the following acts committed with intent to destroy, in whole or in part, a national, ethnic, racial or religious group, as such:

a. killing members of the group;
b. causing serious bodily or mental harm to members of the group;
c. deliberately inflicting on the group conditions of life calculated to bring about its psychical destruction in whole or in part;
d. imposing measures intended to prevent births within the group;
e. forcibly transferring children of the group to another group.

According to the Peace Pledge Union, a non-government organisation formed in 1934 to promote peace, there have been eight genocides in the twentieth century (Melicharova, 2002), as follows:

- 1904 Namibia
- 1915 Armenia
- 1932 Ukraine
- 1933–45 The Holocaust
- 1975 Cambodia
- 1982 Guatemala
- 1994 Rwanda
- 1995 Bosnia

The Holocaust refers to the period (1933–45) when Adolf Hitler, leader of the Nazi Party, killed approximately 6 million Jewish men, women and children (Gitlin, 2011). The Nazis believed that they were the 'master race' and were therefore superior, and that the Jews were subhuman and enemies of Germany (Gitlin, 2011). They also murdered a number of Soviet prisoners of war, Polish intellectuals, Romani (gypsies), homosexuals and people with physical and mental disabilities (Tonge, 2009). The Jews were systematically exterminated in concentration or 'death' camps in Poland and Germany. If not directly killed, many were ill treated, used as slave labour and died from lack of adequate food, exhaustion or disease.

KEY QUESTIONS

- Did you learn about genocide in school? Should subjects such as the Holocaust be taught, and if so how (see Hirsch and Kacandes, 2004)?
- How do you think key historical events, such as war crimes, are dealt with in different countries? Is history always treated in a factual, non-biased manner? If not, why might this be the case?
- What is the role of international education in eliminating prejudice and hatred?
- Can international education achieve peace, tolerance of others and justice for all, or is it just an ideal?

CASE STUDY 20: NATIONALISM VERSUS INTERNATIONAL EDUCATION

One of the purposes of schooling over the years has been concerned with nation-building and preparing pupils to be good citizens (see Marshall, 2018, and Chapter 3). There seems to be a rise globally for nationalistic tendencies with the UK voting to leave the European Union, known as BREXIT, in June 2016 and the election of Donald Trump in November of 2016 as the 45th President of the United States on the back of his 'Make America Great Again' campaign. Much of this resurgence in nationalism has been attributed to anti-immigration sentiment and a nostalgic view of the past when life was better (*The Economist*, 2016).

History education has often been linked to nationalism and helping to shape a shared national identity. However, this has often led to controversy. Ryall (2017) reports that Japan's history textbooks for junior high school students is 'nationalistic' and teaches a very different history to reality. The books present a biased view of history by omitting key atrocities committed by the Japanese in the past. For example, they fail to mention the deaths of over 300,000 in the Nanjing (Nanking) Massacre of 1937, often referred to as the 'Rape of Nanking'. The Nanking Massacre refers to a six-week period when the Japanese captured the city of Nanjing during the Second Sino-Japanese War between the Chinese National Revolutionary Army and the Imperial Japanese Army for control of Nanking (Nanjing), the capital of the Republic of China. In this six-week period, Japanese troops looted, raped and killed Chinese civilians in what has been described as a very brutal way.

Key questions

- Why was it important to use education as a tool for nation-building in the past and how important is it to build a sense of nationhood in the modern era?
- How might presenting a biased view of history create a sense of national identity?
- A goal of international education is to promote peace and international understanding. Is this in direct conflict with the notion of education as a means to nation-building?

SUGGESTED READING

Hayden, M., Levy, J. and Thompson, J. (eds) (2015) *The Sage Handbook of Research in International Education* (2nd edn). London: Sage.

An essential book for anyone wishing to extend their knowledge of international education. It contains numerous articles by well-known scholars in the field. The book contains critical discussions on the origins, current interpretations and contributions of international education.

Hayden, M., Thompson, J. and Bunnell, T. (eds) (2016) *Sage Library of Educational Thought and Practice: International Education*. London: Sage.

This is a series of seminal articles and essays which have been highly influential in the field of international education. Volume 1 focuses on the nature and meaning of international education; Volume 2 on current issues in promoting international education in national and regional contexts; and Volume 3 on global contexts.

Singh, J.P. (2010) *United Nations Educational, Scientific, and Cultural Organization (UNESCO): Creating* Norms *for a Complex World*. Abingdon: Routledge.

This book is ideal if you would like a better understanding of the role of UNESCO in the world and its history.

CHAPTER 8

GLOBALISATION AND EDUCATION

This chapter explores:

- what is meant by globalisation;
- how globalisation has influenced education both nationally and internationally;
- English as a global language.

ACTIVITY 8.1 DEFINING GLOBALISATION (1)

Before beginning this chapter, what do you think globalisation might mean? Write down a definition and then try to think how it might be linked to education.

WHAT IS GLOBALISATION?

Globalisation has been a key theme and hotly debated topic in business, academia and the media since the 1980s. So what exactly is it and how has it come to influence education? Before considering the concept of globalisation, it has to be stated that 'no single universally agreed definition of globalization exists' (Held and McGrew, 2000, p. 3) and it is also 'one of the most charged issues of the day' (Donnellan, 2002, p. 14).

The International Monetary Fund (IMF) refers to globalisation as an economic process which is the result of human innovation and technological advancement. Globalisation is 'the increasing integration of economies around the world, particularly through trade and financial flows. The term sometimes also refers to the movement of people (labor) and knowledge (technology) across international borders' (IMF, 2000).

This definition focuses on the economic dimension of globalisation while others are more inclusive and all-encompassing. For example, 'globalization may be thought of initially as the widening, deepening and
